**E-Mail...** When reference librarians are not available and your need is not time sensitive, contact them via email using our [Ask a Librarian](#) service. A email link is located on that page.

**24/7...** If you need help when the library is closed, we've got it covered. Clarion University Libraries have made arrangements for librarians at a consortium of other universities to help you. They don't know your courses, assignments, or professors, but they will do all they can to help you find the resources you need.

At the [Clarion University Libraries](#) website, click on the [Ask a Librarian / LibAnswers](#) link on the right-hand side of the screen. Then, click on the [Ask Here PA](#) link on the lower left side of the screen. Follow the instructions, and link to a college librarian elsewhere.

## The S.W.A.T. Minion's Tip: Scan And Fix A USB?

Here's a common scenario for many Windows users: you pop in your flash drive (or the memory card from your camera) and Windows insists that there is a problem that needs fixed. Are you risking anything by ignoring the message to scan and fix the drive?

Although the warning has changed slightly in appearance, Windows has been issuing these warnings for a long time. The warning itself is a bit cryptic because it is a catch all for multiple issues.

The *most common* reason Windows prompts you to perform the scan and fix is that the removable media was not properly unmounted and removed from Windows the last time it was used. You know how most of us just unplug our SD cards and USB drives when we are done?

That's not good for your data and it makes Windows grumpy. When you plug the drive back in, Windows knows you didn't eject it properly the last time and it yells at you. This isn't a *Windows-only* thing. It's bad practice to skip unmounting removable media when using other operating systems, too.

Another reason for the warning is corruption within - or damage to - the file system on the removable media.

So what should you do? You should definitely follow the recommendation to "scan and fix" or "repair" the disk (removable media). Windows launches the CHDSK application in the background and scans the disk.

Now, if you do this and then immediately turn right back around and unplug your flash drive or SD card without safely ejecting it, the same “There’s a problem with this drive” prompt will appear the next time you plug the device into your computer. To avoid that annoyance (and to develop a good habit that will protect your data and hardware) right-click on the USB device icon in the Windows system tray and select the removable device you want to eject.

Windows will be happy with you. Your data will be happy because all the read/write activity will terminate gracefully. You will be happy because Windows will stop nagging you. It’s a winning situation all around.

Although we do not “*repair*” computers, the **S.W.A.T. Team** (**S**tudents **W**ho **A**ssist [with] **T**echnology) on Level A of Carlson Library is always happy to help. Having an issue? Let us take a *swat* at it!
