

Chemistry; Bachelor of Science Degree, Biochemistry  
Concentration Program Outcomes

1. A graduate of this program will be able to demonstrate effective command of fundamental chemical concepts and application of those concepts to solve chemical problems.
2. A graduate of this program will understand the theory and operation of chemical/biochemical instrumentation/ techniques used in modern clinical and research labs. In addition, graduates will have a practical level of ability in the evaluation and interpretation of data obtained from these instruments.
3. A graduate of this program will be able to effectively communicate in a scientifically appropriate style.
